

## Software Product Manager 80-100% (m/f/d)

### Your Profile:

- 3+ years of experience in software product management, preferably for B2B solutions.
- Preferred experience working in the electrical energy sector or basic understanding of utilities, distribution and transmission system operators
- Proficiency in web-based platform and software development, with basic knowledge of programming
- Strong UX sense with the ability to create mockups and prototypes
- Preferred experience in power system research, system modelling and simulation
- Proven ability to work with cross-functional teams in an agile environment
- Ability to stay focused on long-term goals while assessing proposed changes and exploring cost and time-efficient alternatives
- Creative, innovation and user-centric mindset with strong communication, analytical and problem-solving skills
- Fluent in both German and English

### What we offer:

- A chance to make an impact in the energy industry
- Plenty of creative freedom to actively shape our products and company development
- Young, collegial, highly motivated team
- Office location in Zurich with flexible working hours, possibilities for home office

### Our Company:

Secure Switzerland AG, a part of the multinational corporation Secure Meters Ltd since November 2021, was founded under the name of Adaptricity AG as a spinoff of the Power Systems Laboratory at ETH Zurich. We specialise in smart grid calculations, simulations, and data analysis. Our young team develops innovative software products that enable grid operators to use challenging analyses and calculations efficiently and quickly for their daily work. In doing so, we strive to substantially contribute to the transition to sustainable energy systems based on renewable energy and electric mobility.

### Your task:

- Drive constant improvement and expansion of the Adaptricity product suite for smarter grid planning
- Align product's direction and strategy with business goals by collaborating with business stakeholders, Sales teams, and end-users
- Conduct workshops with customers, specify new product features, and analyse feedback and usability test results to guide design decisions
- Define requirements and enhance solutions based on customer insights
- Conceptualise and coordinate rapid prototyping of new ideas with the Portfolio and Technology Exploration team and create new product portfolios that support our customers in their energy transition
- Work with the Software Development team to implement customer-requested features and find cost-effective solutions using existing product capabilities
- Partner with the Marketing team to keep users engaged and informed about updates
- Represent the company at events, committees, and standards forums
